[From the Western Rural.]

Will you or some horticulturist answer the following questions in the Western Reval? Is there such a tree as the half standard known among the varieties of fruit trees? If so, how are they produced? Or are we farmers deceived by agents who sell these half standards at different prices? The agents have frequently been ask

they are termed half standard. If the difficulty, have been carried abroad it was found to be out of the question. When they limbs are allowed to come out directly at the ground, and so trained that the lower branches are kept longest, gradually tapering to the top, they be sent to the remote corners of the are then pyramidal trees.

difficulty, have been carried abroad in its was found to be out of the question to drive them together. When they came within sight of each other, their eyes flashed, and their nostrils snorted defiance. If left to themselves they would have surely have engaged in a conflict bitter and remorseless in world. In this manner have grown in a conflict, bitter and remorseless i The term dwarf is used when the

graft is placed in a stock so unconge- up naturally, and, as it were of their nial as to prevent a full transmission own accord, the manufactories of of sap, as by budding or grafting the Leeds, Halifax, Sheffield, Birmingsas, or other dwarf plums, and the tree growing cherries on the Malahed, or Morello varieties of cherries.

know that these several classes of socalled half standards are all humbug;
or rather they are made so by the after training and culture.

We would not advise you to invest
in half standards, unless you are prepared to give them the special care
they need; and in this case you may
make them so by a proper course of
might.

Can be done won't avail anything if the
